

# Endress+Hauser kicks off largest construction project in the company's history

100 million euro investment in the Maulburg production site paves the way for sustainable growth

**The Endress+Hauser success story has been closely tied to the Maulburg location in southern Germany for more than 60 years. The Group's oldest and largest production facility will now undergo a comprehensive modernization and expansion. The specialist for measurement technology and automation solutions is investing a record sum of more than 100 million euros in the Campus 2030+ project to make the production and development of level and pressure measurement technology future-proof and sustainable.**

## **Gradual renovation, uninterrupted operation**

Campus 2030+ will enable more efficient production flows and enlarge the office space. The production and logistics area will be the first to undergo renovation in the coming years. This will involve extensively renovating existing buildings or replacing them with new ones. The first phase of the project, including utilization, is scheduled for completion in 2027. The office buildings will be renovated in a second step.

Dr Dirk Mörmann, managing director of Endress+Hauser Level+Pressure, says: "With the Campus 2030+ project we are making a further commitment to Germany as a business location. We are creating a permanent foundation for more than 2,000 jobs in the region. Worldwide demand for highly precise, innovative measurement technology for the process industry continues unabated. The further development of the Maulburg location will allow us to serve the needs of our customers even better. We are strengthening our global production network and increasing our competitiveness."

## **Milestones on the road to CO<sub>2</sub> neutrality**

The Campus 2030+ project means Endress+Hauser will be more sustainable in many respects. The Maulburg location already produces up to 45 percent of its electricity needs on its own, primarily through solar energy and combined heat and power generation. Even so, the construction measures will significantly increase energy efficiency. The new and renovated buildings will be able to operate at an energy self-sufficiency rate of up to 90 percent. No additional real estate will be utilized for the project. Some areas that are currently sealed will eventually be turned into green space. Optimized logistics will reduce vehicle traffic and thus noise levels.

## **Sustainable growth**

"As a family company, Endress+Hauser thinks and acts with a long-term mindset," says Dr Peter Selders, CEO of the Group. "This mindset is also behind the largest investment project in the company's history. With the Campus 2030+ project, we are securing the future capability of our product center for level and pressure measurement while demonstrating that sustainability can be reconciled with growth and profitability."

## The Endress+Hauser Group

Endress+Hauser is a global leader in measurement and automation technology for process and laboratory applications. The family company, headquartered in Reinach, Switzerland, achieved net sales of more than 3.7 billion euros in 2023 with a total workforce of almost 17,000.

Endress+Hauser devices, solutions and services are at home in many industries. Customers thus use them to gain valuable knowledge from their applications. This enables them to improve their products, work economically and at the same time protect people and the environment.

Endress+Hauser is a reliable partner worldwide. Its own sales companies in more than 50 countries as well as representatives in another 70 countries ensure competent support. Production facilities on four continents manufacture quickly and flexibly to the highest quality standards.

Endress+Hauser was founded in 1953 by Georg H Endress and Ludwig Hauser. Ever since, the company has been pushing ahead with the development and use of innovative technologies, now helping to shape the industry's digital transformation. 8,900 patents and applications protect the Group's intellectual property.
